PROFESSIONAL SUMMARY

Junior QA tester with hands-on experience testing software builds, documenting reproducible bugs, reviewing code, and managing version control on an 8-person student Unity game team. Background in C#, C++ and JavaScript, with experience troubleshooting integration and merge issues. Currently completing the Microsoft Junior QA / Software Tester Professional Certificate. NYU BFA graduate.

TECHNICAL SKILLS

Testing: Manual testing, exploratory testing, bug reproduction, defect reporting, test documentation, fix verification

Tools: Git/GitHub, Unity, Visual Studio Code, Microsoft 365

Currently studying: Jira, Zephyr, Azure DevOps, Playwright, SQL, Apache JMeter

Languages: C#, C++, JavaScript, HTML, CSS, React

PROJECTS

Group 5 FPS *Lead Programmer / QA and Version Control (Unity, C#, GitHub)*

- Led programming for an 8-person student team (6 students plus 2 leads) building a Unity FPS in weekly sprints, assigning tasks to three programmers and managing version control and QA.
- Tested programmers' work at the end of each weekly sprint, documenting reproducible bugs and reviewing findings one-on-one with programmers to support troubleshooting and fixes.
- Reviewed code and merged branches to main on GitHub. After a merge broke main (engine version mismatch), set a sign-off rule for all merges and kept a backup branch.
- Shipped the minimum viable product in 8 weeks, with biweekly professor reviews and deliverables.

MazeWeb *Designer / Programmer (JavaScript, Unity WebGL, React)*

- Built a randomly generated maze game where JavaScript game logic drives a Unity WebGL build, passing maze data into the engine so it builds the level in real time, with menus, volume controls and a reset flow built in React.
- Manually tested and debugged the JavaScript-to-Unity integration by tracing execution paths and adding temporary keyboard triggers to isolate and verify specific features. Debugged AI-assisted code using Cursor.

EXPERIENCE

Rental Tech October 2026 to present
LVR New York, NY

- Pull, test and check out camera, lighting and grip equipment against client rental contracts, then print contracts and get signatures and management approval before release.
- Inspect and test returned equipment: scan items into the system, reconcile against the contract, and log damaged or missing items before closing it out.
- Work daily in proprietary inventory and contract software, locating items by barcode or ID number.

Short Film Editor and Script Supervisor January - May 2025
NYU (student film)

- Tracked continuity across takes as script supervisor, documenting props, actors and lines so inconsistencies were caught on set instead of in the edit.
- Handled DIT and dailies: transferred and organized footage and kept files documented for the editing team.
- Edited the film with the director through rough, class and final cuts, checking continuity between takes and meeting set deadlines.

Front End / Stocking Assistant 2020 to 2022
Kroger Great Bend, KS

- Helped customers, worked with inventory, and handled department opening and closing as part of a team.

EDUCATION AND CERTIFICATION

New York University August 2026
BFA in Film and Television

Microsoft Junior QA / Software Tester Professional Certificate (in progress): SDLC and Agile/Scrum, defect management, test design, API validation, SQL data validation, Playwright automation, Jira and Zephyr
